

This week you are going to make a simple TV-show viewer app that looks good on a desktop and mobile environment. You are also going to get yourself familiarized with URL query parameters.

1. Fetching data

Create a form with a text input field with an id of "input-show" and a button with an id of "submit-data" and a <div> with a class of "show-container".

Using the form, fetch data from <https://api.tvmaze.com/search/shows?q=> where the value of the input field is set to the query parameter q (for example, when searching for "friends" the url would look like <https://api.tvmaze.com/search/shows?q=friends>). The API returns an array of shows that match the search parameter.

From the data, create show-data elements and add them to the child of the "show-container" div. An example of a show-data element is shown below. The container must not contain any previous search results.

When you pass the value of the input field to the query parameter, DO NOT use encodeURIComponent(); function, since CodeGrade uses already encoded values.

```
<div class="show-data">
  
  <div class="show-info">
    <h1>[Show title]</h1>
    <p>[Show summary]</p>
  </div>
</div>
```

Generate the template in JavaScript, one for each show. Don't copy-paste it into the HTML.

(Note that the API gives the summary already wrapped in <p> tags)

2. Desktop environment styling

Let's add some styling to the webpage to make it look acceptable on a desktop environment. Add the following tag to the head of the document: <meta name="viewport" content="width=device-width, initial-scale=1.0"> to let the browser know how to set the page's dimensions and scaling.

The document body should have:

- Background color "#e6eff1"

The show-container class should have:

Additionally, the class show-data should have the following style properties:

- Width should be set to 100%
- Background color of "#cfd8dc"
- Margin-top of 10px
- Margin-bottom of 10px
- Padding of 10px
- Border radius of 6px
- Box shadow to make it look like the elements are floating on the page. Box shadow can look whatever you think is best
- The h1 element in this class should have its text centered
- The image should have display set to block

Show-info class should have the following properties:

- Width should be 100%

Additionally, using CSS media queries, set the following properties to devices over 800px wide:

- Show-data class should have its display set to flex
- Show-info should have a padding of 10px

3. Mobile environment styling

Currently, the webpage looks ok on PC but on a mobile environment the webpage looks less-than-ideal. We can fix this by using CSS media queries. Devices less than 800px wide should have the following properties:

- The img element should have "margin: auto"
- The p element inside show-info should have its text centered and a padding of 10px

4. Web fonts

Add the font "Roboto" to your webpage. <https://fonts.google.com/selection?selection.family=Roboto>. Press the "Get embedded code" to get the import URLs. Make sure to add the CSS rule provided in the website as well.

(Note. You have to import the font via HTML. Otherwise CodeGrade doesn't recognize it.)

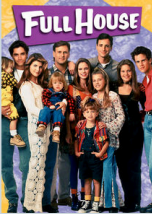

5. Bootstrap

Add Bootstrap front-end framework to your website: <https://getbootstrap.com/docs/5.2/getting-started/download/#cdn-via-javascript> use the hosted version. Add a Bootstrap [navbar](#) to your app and move the search form inside of it.

- [Media queries](#)
- [Bootstrap navbar](#)

Example website on both desktop and mobile environment

	House Sink your teeth into meaty drama and intrigue with House, FOX's take on mystery, where the villain is a medical malady and the hero is an irreverent, controversial doctor who trusts no one, least of all his patients. Dr. Gregory House is a maverick physician who is devoid of bedside manner. While his behavior can border on antisocial, Dr. House thrives on the challenge of solving the medical puzzles that other doctors give up on. Together with his hand-picked team of young medical experts, he'll do whatever it takes in the race against the clock to solve the case.
	Full House Full House follows Danny Tanner, widowed father of three young and rambunctious girls recruits his two buddies—his rock 'n' roller brother-in-law, Jesse, and his best friend, Joey, an infrequently employed stand-up comic—to move in and help him raise the brood.
	Winter House The all-new series Winter House, premiering this fall, will feature cast members from <i>Summer House</i> and <i>Southern Charm</i>, as well as their friends, during a two-week vacation at a ski house in Vermont.

House

Sink your teeth into meaty drama and intrigue with **House**, FOX's take on mystery, where the villain is a medical malady and the hero is an irreverent, controversial doctor who trusts no one, least of all his patients.

Dr. Gregory House is a maverick physician who is devoid of bedside manner. While his behavior can border on antisocial, Dr. House thrives on the challenge of solving the medical puzzles that other doctors give up on. Together with his hand-picked team of young medical experts, he'll do whatever it takes in the race against the clock to solve the case.
